Editor's Remarks

The CSHPM held its 38th annual meeting at the University of Waterloo in 2012, a meeting that was by all accounts highly successful, well-attended, and productive of a large number of research papers, a portion of which are printed here as the conference *Proceedings*. The papers that do not appear fall into three categories: those that have appeared elsewhere; those that the authors expressly did not have time to complete; and others. I'd like to thank those authors who did submit for their efforts at producing interesting papers that were also free of typographical error.

Correction: Michael Cuffaro, an author in this volume as well, brings an addition to his contribution to the previous volume. He writes: "I wish to take the opportunity to remedy a past oversight: in a previous contribution to the proceedings ("Wittgenstein on Prior Probabilities," *Proceedings of the Canadian Society for History and Philosophy of Mathematics, 23* (2010), 85-98), I neglected to thank Ryan Samaroo for producing the French translation of the abstract of that paper. I do so now."

I am very late with this volume, for the usual reasons, and I'd like to thank the members, especially the authors, for their patience and forebearance. The present volume was prepared using LaTeX and the `amsproc` style file and accompanying templates that the American Mathematically thoughtfully makes available. The countably many errors that have resulted from various retyping exercises are the fault of the editor.
